

The Iroquoain Village and Interpretive Centre

The Kanata Interpretive Centre is designed as a collection of long houses found in and bound by an expanding series of circles. The steel structure braces the building not unlike wooden poles. The building opens on the left side and looks towards a recreation of a 16th century Village. The great circle, which encompasses the entire building, finds its centre in a small story telling and exhibition circle which anchors the building to the site. The story circle also provides a visual link to the village with a path that extends out and into the palisade.

The Building is intended for multiple uses including the housing of artifacts, providing a venue for arts and crafts and to give focus to community activities and events.

Client:	Pine Tree Native Centre of Brant
Size:	5,100 ft ²
Cost:	\$1.0 M project value (including Village)
Architect:	Two Row Architect
Status:	Occupancy 1999
